***Allowable Subject Matter***

The claimed invention, as presently described, now requires (i) that the intermediate layer be comprised of either aromatic polyimide or polyethylene naphthalate, and (ii) that the intermediate layer have pores smaller than 0.3 mm in diameter. The significance of the latter limitation is that the best prior art discloses a composite wherein the intermediate layer has pores of at least 0.3 mm in diameter.

Earlier, Applicant had filed a Rule 1.132 Declaration establishing that a specified film from the TEONEX brand, which was to correspond to the aforementioned intermediate film, had pores not larger than 0.3 mm in diameter. The Examiner had several misgivings about this rather limited showing, not the least of which was that the film in Applicants' example in their original Specification was reported simply as TEONEX because there was no evidence that the film tested in that April 28, 2008 submission was, in fact, the same material that had been alluded to in the Specification. Applicant later responded to the Examiner's concerns with another Declaration that showed that various polyethylene naphthalate films under the TEONEX moniker all were in possession of the newly added limitation of being devoid of pores with a diameter of 0.3 mm or greater.

After receipt of Applicant's October 6, 2008 submission, the Examiner contacted the Applicant to advise them that they had perhaps not yet met their burden of establishing that they had possession of the invention as claimed insofar as all of the films tested were of the polyethylene naphthalate type whereas the claims, as of that moment, embraced all manner of synthetic resin film. That is to say, a representative

number of species- see MPEP 2163- had not yet been shown to have pores of the specified size. In response, Applicant further limited the claim to stipulate that the intermediate layer was either PEN or aromatic polyimide. Accompanying that amendment was yet another Declaration that confirmed that Kapton 100H, which is the embodiment of the aromatic polyimide used in Examples 1 and 2 of the original Specification, also had pores smaller than 0.3 mm in diameter.

Based on discussions with colleagues, it is the Examiner's position that Applicant has satisfied the written description requirement having proven that they were in possession of the invention as it is now claimed at the time the original disclosure was filed. Further, the art of record has been obviated in view of the various showings made by Applicant that the pore size limitation of their intermediate layer is less than 0.3 mm whereas the corresponding layer of the prior art has a minimum pore of greater than 0.3 mm.

An updated survey of the prior art did not yield a reference more germane than those already cited. Accordingly, claims 1-2, 4-8 and 13-19 are deemed allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MARC S. ZIMMER whose telephone number is (571)272-1096. The examiner can normally be reached on Monday-Friday 8:30-5:00.
